Progesterone Therapy During Pregnancy: Virtual Management, Non-Covered Service Waiver

The Fertility & Midwifery Care Center has recommended that you follow the Creighton Model Fertility Care progesterone protocol based on your history and/or a documented progesterone level. This protocol will require measuring your progesterone level every 2-4 weeks and, if indicated, treatment with progesterone therapy.

The providers at the Fertility & Midwifery Care Center are willing to manage your progesterone levels remotely, that is, without having to see you in the office. Our providers will order all necessary labs and medication(s), review the results throughout your pregnancy, and make recommendations for progesterone dosage changes based on the protocol. This remote management is considered a “non-covered” service and is **not** billed to your insurance company resulting in a one-time, per pregnancy fee of \$250.

By signing below, you acknowledge your agreement with and financial responsibility for this fee. Further, you acknowledge your sole responsibility for this fee; it will not be forwarded to your insurance company.
